Education

Bachelor of Technology in Computer Science and Engineering
2023-2027
CVR College Of Engineering Rangareddy
CGPA : 9.61/10.0

Skills

Languages: Java, Python, HTML5, CSS3, JavaScript,TypeScript.
Frameworks & Libraries: ExpressJS, NodeJS, ReactJS ,Bootstrap.
Machine Learning & AI : ML, Generative AI, Natural language Processing, Prompt Engineering, LLMs, RAG, Scikit-learn.
Developer Tools: Git, Docker, Render, Vercel, Google Cloud.
Databases: MySQL,MongoDB,Firebase
Core Concepts: DSA, DBMS , OOP, System Design, Computer Networks, OS, REST APIs, JWT Authentication.
Soft Skills : Problem Solving, Analytical Thinking , Leadership,Adaptability, Critical Thinking, Effective Communication.

Certifications

FULL STACK WEB DEVELOPMENT
JUNE 2025 – JUNE 2026 | UDEMY

JNCIA- Junos & Networking Virtual Internship | Juniper Networks 2025

ORACLE SQL CERTIFICATION
JAN 2025 – MAY 2025 | ORACLE

Red Hat Application Development I: Programming in Java EE | Red Hat 2025

AWS Academy Cloud Foundations & Operations JULY 2026

Achievements

-500+ Leetcode Problems Solved.
-74th Rank at NIT Bhopal Hackathon progressing through 3 competitive rounds around 1,000 + teams.
-Academic Excellence Award by Sabitha Indhra Reddy during Telangana decade Formation Celebrations 2023.
-Paper Presentation Winners | AVNIT & VGNIT | FEB -MAR

Professional Description

Enthusiastic BTech student passionate about Web development and Machine Learning, Data Analytics and Blockchain. Skilled in leading teams, solving problems, and delivering user-friendly solutions with a goal-driven and detail-oriented approach.

Experience

PwC Launchpad Program | Industry Learning Experience **FEB 2026- AUG 2026**
Generative AI | Database Systems | Python | Cloud Engineering | Soft Skills
- Completed an immersive industry learning experience in Python Fundamentals, Generative AI, Modern Data Systems, and Cloud Engineering , building expertise in emerging technologies and modern software practices.
- Explored the integration of AI-driven intelligence, data-centric architectures, and cloud-native principles to understand how scalable digital solutions address real world business challenges.
- Participated in 240+ hands-on activities, business simulations, and case-based exercises, strengthening analytical thinking, structured problem-solving, stakeholder communication, and cross-functional collaboration.

Wipro Project-Based Learning (PBL) | Java Full Stack **JULY 2026-AUG 2026**
-Completed intensive hands-on training in Core Java, OOP, Collections, Exception Handling, Multithreading, I/O Streams, and JDBC.
-Developed enterprise web application skills using Servlets, JSP, HTML, CSS, JavaScript, XML, and AJAX.
-Worked with RDBMS, SQL, JDBC, Spring, and Spring Boot, gaining practical exposure to Java-based backend development and enterprise application concepts.

Projects

PRO-SHOPIFY | AI-based E-Commerce Recommendation system with Analytics dashboard & Chatbot Support | Web Application | LiveDemo **JUN 2025-MAY 2026**
Tech Stack: ReactJS, NodeJS, ExpressJs, MongoDB, Python, Scikit-learn, JWT, REST APIs, Groq API, Chart.js, GitHub
- Developed a Shopify-inspired AI-powered e-commerce platform integrating a hybrid recommendation engine, real-time analytics dashboard, and intelligent chatbot support to deliver personalized shopping experiences.
-Engineered a machine learning microservice leveraging content-based and collaborative filtering to generate recommendations and predictive insights, with fallback mechanisms for cold-start scenarios.
- Built a Groq API-powered chatbot with intent recognition, automated query handling, and admin escalation for complex cases, while securing backend services through JWT-authenticated REST APIs.

E-VOTING THROUGH BLOCKCHAIN | Team Lead | Decentralized Web Application
Tech Stack: ReactJS, Solidity, NodeJS, Hardhat, REST APIs, JWT Authentication.
Aim: Developed a secure and transparent e-voting platform leveraging blockchain Technology to ensure tamper-proof and verifiable elections.
-Led a 3-member team to build the decentralized system using ReactJS, NodeJs, Solidity, and Hardhat, integrating REST APIs for voter authentication and real-time result updates, improving user engagement by 35%.
SPAM DETECTION USING NLP | Python, Scikit-learn, Streamlit, TF-IDF,NLTK | Demo
Aim: Designed an NLP-driven spam classification system for accurate real-time Email filtering and prediction.
-Engineered an end-to-end pipeline using text preprocessing, TF-IDF Vectorization, and Scikit-learn models, deploying the best-performing classifier through Streamlit with confidence score visualization.
